

ECVET Earth Building	Building with earth - masonry, cob, rammed	Unit B common part
----------------------	---	-------------------------------

Learning outcomes		Levels 3+4
KNOWLEDGE	SKILLS	
<ul style="list-style-type: none"> - Geological, geographical and cultural issues affecting traditional and modern earth building techniques - Schedule plans, specifications and bills of quantities - Seasonal appropriateness and timing - Protection before, during and after building: covering choices, and how they aid or impede drying - Basic knowledge about building physics/structural behaviour - Characteristics of curved walls / walls with complex geometry - Height and width ratio (slenderness) in humid and dry state, how high to build according to the technique, weather and site conditions - Foundations, wall base and DPC (Damp Proof Course) - Connections with other walls or components, expansion- and structural joints, bonding techniques - Particular issues with scaffolding: fixing, splash-back - Fixing structural or non-structural elements, insulation, etc. - Protection / reinforcement of edge and corner - Openings: frames, lintels, sills - Services - Top of walls, interface with other built elements - Technical or decorative elements: furniture, stairs, stoves, chimneys... - Sourcing and use of earth products - Machinery and tools for mixing, cutting, lifting, laying, placing, compacting - The schedule of works: reporting of building progress - Significant defects. Signs of deformation and collapse or slumping. Means of prevention - The impact of drying on speed of build - Methods to test and control moisture content (site or lab) - Drying process, shrinkage - Quality control on building site - Site organisation, storage, access, scaffolding - The ergonomics of the workstation - Health and safety regulations 	<p>Preparatory works and planning</p> <ul style="list-style-type: none"> - Read plans and technical specifications - Check dimensions and quality of foundations and subflooring - Plan for seasonal appropriateness and timing - Prepare during-the-work protection - Regularly control mix moisture and/or fibre content - Protect adjoining surfaces <p>Execution</p> <ul style="list-style-type: none"> - Create capillary break (e.g. place DPC Damp Proof Course) - Connect earth walls to other components (earth or not), create expansion/shrinkage and structural joints - Place/fix structural and non structural elements (wall plates, frames, sills) - Integrate appropriate insulation systems - Make chamfered, shaped or reinforced corners - Key/dampen day work - Create openings - Chase/build in services (pipes, boxes, fixing) - Integrate reinforcing (geo grid, wire mesh) - Prepare top of wall interface with other built elements - Execute special elements following instructions - Produce required surface finish - Make the necessary surface repairs <p>Site organisation</p> <ul style="list-style-type: none"> - Check scaffolding, avoiding wall damage and splash-back - Install a small building site with or without on-site production - Select appropriate tools, machinery, equipment - Organise the workplace and supply materials - Manage plant for transport, lifting and handling of prefabricated elements - Protect the work during and after building (water, damage/abrasion, paint...) 	

Decision making process

- In the design brief, identify details proper to earth that need particular attention
- Recognise conditions including weather and seasonal issues which may require precautions

Planning and organising for own work

- With the materials provided, plan and organise each step of the building process, according to the specifications and program

Execution, quality control and coordination within the earth building team

- Work in accordance with the schedule of works, adjust to general work process on site, instruct Level 1 + 2 workers of the earth building team
- Check if all the steps involved conform to the specification and program
- Identify problems and report
- Control quality of the own work at each step
- Regularly check the drying process
- Recognise the signs of deformation and collapse
- Ensure your team respects health and safety regulations

Communication beyond the earth building team

- Liaise with non earth building specialists on issues of structure and finish

COMPETENCE		Level 4
<p>Decision making process</p> <ul style="list-style-type: none"> - Advise on details in the design process - Recognise conditions including weather and seasonal issues which may require precautions <p>Planning and organising for team work</p> <ul style="list-style-type: none"> - Plan and organise all the step of the building process <p>Execution, quality control and coordination within the earth building team</p> <ul style="list-style-type: none"> - Supervise and coordinate the entire work of the earth building team according to the specifications and program - Report building progress - Identify significant problems and intervene - Control quality of the work of the earth building team - Manage the drying process - Recognise the signs of deformation and collapse - Ensure your team respects health and safety regulations <p>Communication beyond the earth building team</p> <ul style="list-style-type: none"> - Liaise with supervision and design team - Liaise with other trades and professionals, coordinate and sequence earth works within the general schedule - Liaise with non earth building specialists on issues of structure and finish 		
ECVET Earth Building	Building with earth - masonry with clay mortar	Unit B sub unit

Learning outcomes		Level 3+4
SPECIFIC KNOWLEDGE	SPECIFIC SKILLS	
<ul style="list-style-type: none"> - Masonry basics: setting out, laying, level, verticality - Compatibility between masonry elements and mortar type - Features of complex geometry: curved walls, vaults, domes, pillars 	<ul style="list-style-type: none"> - Execute basic masonry works: setting out, laying, level, verticality - Use appropriate mortar, control its moisture content - Lay the masonry <ul style="list-style-type: none"> o Prepare (wetting, brushing, cleaning), cut, shape elements o Lay the masonry using appropriate bonding and coursing 	

Criteria and Indicators for the Assessment of Skills		Level 3+4
Criteria	Indicators	
Building masonry	<ul style="list-style-type: none"> - The setting out is done according to plans - The laying starts with corners, using measurement points, building lines and levels - The bonding pattern is correct (rules for thickness of walls and joints, courses) - Settling and drying is managed - Elements are prepared correctly: watered, cut to shape, quantities - The workflow is ergonomic and efficient - The choice of tools and equipment (transport, lift, placing) is correct - The course height stopped before deformation - Quantity of mortar is calculated and the moisture content is controlled - Quantity of bricks or blocs is calculated - Joints are regular (between courses and elements) and filled 	
Finished built piece	<ul style="list-style-type: none"> - Built piece respects position, dimensions, shape required - Built piece corresponds to requirements (fair faced masonry or prepared for coatings) 	

	- Aesthetics requirement are respected (bonding, pointing, local styles, brick faces the right side,...)
Quality of details	- The details are correctly executed following the plans: <ul style="list-style-type: none"> ○ Arches: frames, masonry ○ Connection to foundation ○ Timber frame infill ○ Connection to other walls ○ Anchoring of structural and non structural elements ○ Openings: Beams and lintels are correctly fixed on even support, their length and strength is appropriate ○ Services
Protection	- The work has efficient appropriate protection during and after completion - Materials are protected - The adjoining surfaces are protected

Ensure that standards of work and materials comply with relevant codes of practice and to current standards.

ECVET Earth Building	Building with earth - cob	Unit B sub unit
----------------------	--------------------------------------	----------------------------

Learning outcomes		Level 3+4
SPECIFIC KNOWLEDGE	SPECIFIC SKILLS	
<ul style="list-style-type: none"> - Different methods and tools for placing, shaping, compacting, cutting: <ul style="list-style-type: none"> o Trimming/cutting/paring tools o Compacting and beating tools o Selective use of movable formwork for cob - Drying process: <ul style="list-style-type: none"> o Differential shrinkage o The use of compatible materials and techniques to fill shrinkage gaps - Remedial measures for wall movement during construction - Methods of rebuilding, jointing, staggering, propping 	<ul style="list-style-type: none"> - Lift and place mix: by hand, pitch forks, shuttering, digger, bucket - Work to continuous and horizontal lifts - Shape and compact cob (top and sides) - Use appropriate tools to cut according to the firmness of the wall - Recycle the trimmings - Assess the maximum height limit of the lift periodically - Choose the right moment to continue loading new work - Carry out remedial work during the building process 	

Criteria and Indicators for the Assessment of Skills		Level 3+4
Criteria	Indicators	
Building in lifts	<ul style="list-style-type: none"> - The choice of equipment is appropriate - The plasticity of the mix is even and controlled - The “fibre” surface has a uniform appearance - The lift height stopped before deformation - There aren’t any observable weak points due to lack of density - The cob is placed correctly and well bonded - The surface is correctly compacted - Overhang is appropriate to the wall conditions - The quantity of bob mix is calculated 	
Dressing	<ul style="list-style-type: none"> - The choice of equipment is appropriate according to the plasticity - The trimmings are recycled 	
Quality of details	<ul style="list-style-type: none"> - Structural elements (reinforcements, lintels, ring beams, frames) are set out and laid correctly - Services, fixing points, block outs are laid correctly - Joints with other walls are right, filled and regular 	
Finishing works	<ul style="list-style-type: none"> - The tools used are appropriate. - Remedial work is done after paring, as long as the plasticity still allows it. - Shrinkage gaps in contact with other materials are well filled - Aesthetic requirements are respected 	
Protection	<ul style="list-style-type: none"> - The work has efficient appropriate protection during and after completion - Materials are protected - The adjoining surfaces are protected 	

Ensure that standards of work and materials comply with relevant codes of practice and to current standards.

ECVET Earth Building	Building with earth - rammed earth	Unit B sub unit
----------------------	---	----------------------------

Learning outcomes		Level 3+4
SPECIFIC KNOWLEDGE	SPECIFIC SKILLS	
<ul style="list-style-type: none"> - Equipment for compacting - Protection against movement or shrinkage cracks <ul style="list-style-type: none"> o Traditional: layers of lime, etc. o Contemporary: mesh frames, geotextiles, etc. o Spacing of construction joints - Factors influencing the final rammed wall surface quality - Prefabrication - Formwork - Specific safety works at height; pneumatic equipment - Stripping: close holes, faults correction, finishing 	<ul style="list-style-type: none"> - Lift and place mix inside the formwork avoiding disaggregation - Check and manage the depth of fill before compacting - Manage the number of passes with the rammer - Identify the right time to stop the ramming process (touch, visual and auditory control) - Periodically check the position and stability of the formwork (no lifting, plumb, alignment, tightness) - Compact the earth using pneumatic or manual rammers - Carry out remedial work after stripping - Build demonstration wall on site 	

Criteria and Indicators for the Assessment of Skills		Level 3+4
Criteria	Indicators	
Infill	<ul style="list-style-type: none"> - The choice of equipment (transport, lift, placing) is appropriate - The moisture content is regularly checked and maintained to optimum - Infill thickness allows sufficient compaction of each layer - The infill agrees with requirements of the surface design - The quantity of rammed earth mix is calculated 	
Compacting	<ul style="list-style-type: none"> - Mechanical and manual rammer are appropriate - Rammer is well used - Each layer is sufficiently rammed by regular successive passes, from the exterior to the interior - The right time to stop the ramming process is clearly identified 	
Quality of details	<ul style="list-style-type: none"> - Structural elements (reinforcements, lintels, ring beams, frames) are set up and laid correctly - Services, fixing points, block outs are laid correctly - Corners are well chamfered, shaped or reinforced - Shrinkage joints are executed correctly - Structural joints (between 2 earth walls and different materials) are tight 	
Finishing works after stripping	<ul style="list-style-type: none"> - Small repair and filling of holes are not visible - Surface treatment is done with appropriate products on the dry wall - Aesthetic requirements are respected 	
Protection	<ul style="list-style-type: none"> - Propping ensures stability before wall dries or bracing is fixed - The work has efficient appropriate protection during and after completion - Materials are protected - The adjoining surfaces are protected 	

Ensure that standards of work and materials comply with relevant codes of practice and to current standards.
